## OBJETIVO

O objetivo principal deste artefato é promover uma visão abrangente da operação de suporte técnico, monitoramento e atualização da solução, para o atendimento às necessidades do negócio.

O presente relatório apresenta, de forma geral, informações referentes ao sistema SISGEN itens encontrados durante a operação assistida referentes ao mês de junho e julho no intervalo de 21/10/2021 a 20/11/2021, em casos específicos de monitoramento do sistema SISGEN que possui a Solução de Blindagem implementada.

Ainda, este relatório serve como base para análises das equipes de segurança presentes no MMA, a fim de complementar informações inerentes à acessos indevidos por usuários no sistema protegido.

### 1. INTRODUÇÃO

Em atendimento ao disposto do contrato BRA10-38336, o presente relatório registra as atividades de Prestação de serviços de suporte técnico, atualizações de versão, monitoramento e operação da Solução de Blindagem do domínio WEB, visando a proteção contra fraudes e ameaças digitais que possam comprometer o Sistema Nacional de Gestão do Patrimônio Genético e do Conhecimento Tradicional Associado – SISGEN disponibilizadas ao PNUD assim como os chamados de suporte técnico e manutenção da Solução de Segurança da Informação e Monitoramento do Acesso a Aplicações Web com Recursos Avançados de Combate a Fraudes.

### 2. EVENTOS DE SUPORTE

A abertura de chamados deve seguir as orientações do manual de uso dos serviços de suporte técnico, conforme documento entregue aos gestores do contrato na aquisição da licença. No documento estão especificados os endereços de e-mail, telefones e demais formas de contato para a equipe de atendimento da Every Cybersecurity and GRC Solutions e do fabricante da solução, TOPAZ.

### 3. ATIVIDADES DESEMPENHADAS

As atividades desempenhadas ao longo do período tiveram por orientação as designações estabelecidas no contrato BRA10-38336.

Ressaltamos que a lista de atividades é balizadora da prestação de serviço não havendo, portanto, nenhuma restrição ao acréscimo dos serviços de

atendimento aos usuários e eventuais discussões de cunho técnico junto as equipes responsáveis pelos sistemas.

### **3.1. APOIO NO DIAGNÓSTICO DE ATAQUES E AMEAÇAS**

A solução de blindagem WEB tem como um de seus pilares a identificação de eventuais ataques e ameaças iminentes aos referidos sistemas. O apoio no diagnóstico é traduzido em atividades de identificação de pontos de atenção e encaminhamento tempestivo para tratamento das respectivas áreas responsáveis do Ministério do Meio Ambiente. Exemplos de ocorrências de ataque são tentativas massivas de acesso, tentativas de uso do sistema sem o uso do agente de proteção, uso de máquinas reconhecidamente fraudulentas, entre outros.

### **3.2. MONITORAMENTO DAS OCORRÊNCIAS GERADAS**

Base do serviço de operação assistida, o monitoramento das ocorrências geradas pela solução de blindagem permite a identificação imediata de situações adversas que possam impactar de alguma forma os sistemas protegidos pela solução de blindagem WEB. A geração de ocorrências é realizada por meio da recepção de sinais enviados por cada um dos componentes instalados previamente nos computadores que originam acesso ao sistema e organizadas de acordo com a necessidade de análise dos profissionais alocados na operação assistida. Todas as informações geradas são armazenadas de modo criptografado em banco de dados de uso exclusivo do Ministério do Meio Ambiente. Esse monitoramento é realizado diariamente conforme acordado em contrato.

### **3.3. APOIO AO MONITORAMENTO DE ALERTAS E OTIMIZAÇÃO DA DEFESA**

Complementar ao monitoramento de ocorrências, as atividades de monitoramento de alertas permitem a criação e acompanhamento de regras de segurança para máquinas, usuários, endereços e localização dos acessos, garantindo que mesmo sem a verificação humana dos registros, a operação assistida possa identificar imediatamente situações em que a conjunção das informações indique uma possível fraude ou mal-uso do sistema. Esse monitoramento é realizado diariamente conforme acordado em contrato.

### **3.4. PROPOSIÇÃO DE CONFIGURAÇÕES E AJUSTES NO PROCESSO DE MONITORAMENTO E COMBATE A FRAUDES**

A permanente melhoria do ambiente e da própria solução de blindagem permite que sejam incorporadas novidades ao longo do período de operação assistida, trazendo benefícios diretos aos gestores do Ministério do Meio Ambiente. Como exemplo podemos citar a criação de visualizações gráficas da situação dos acessos e ocorrências, criação de painéis de indicadores, automatização da consolidação de informações, entre outros.

### 3.5. ATENDIMENTO AOS USUÁRIOS

Como parte do esforço para minimização de impactos negativos na imagem da instituição e dos sistemas protegidos, a equipe de operação assistida atua como ponto de contato e apoio para eventuais dúvidas que os usuários possam ter nas operações de instalação e uso do componente que é pré-requisito para acesso ao sistema. Todos os atendimentos e interações com usuários externos são registrados em sistema próprio do Ministério do Meio Ambiente indicado pela CGTI.

### 3.6. ELABORAÇÃO DE RELATÓRIO MENSAL

Para registro das informações geradas pela operação assistida é gerado, ao final do período de apuração mensal, o relatório executivo de ocorrências de segurança contém informações das ocorrências de segurança registradas, os encaminhamentos realizados e as orientações de ação sugeridas para os casos mais relevantes.

### 3.7. ATENDIMENTO AO USUÁRIO

Durante o período compreendido por este relatório, não houve abertura de chamados relacionados à problemas com a ferramenta de segurança, conseqüentemente não foram realizados atendimentos aos usuários do sistema protegido.

#### 4. ANÁLISE GERAL DOS RELATÓRIOS

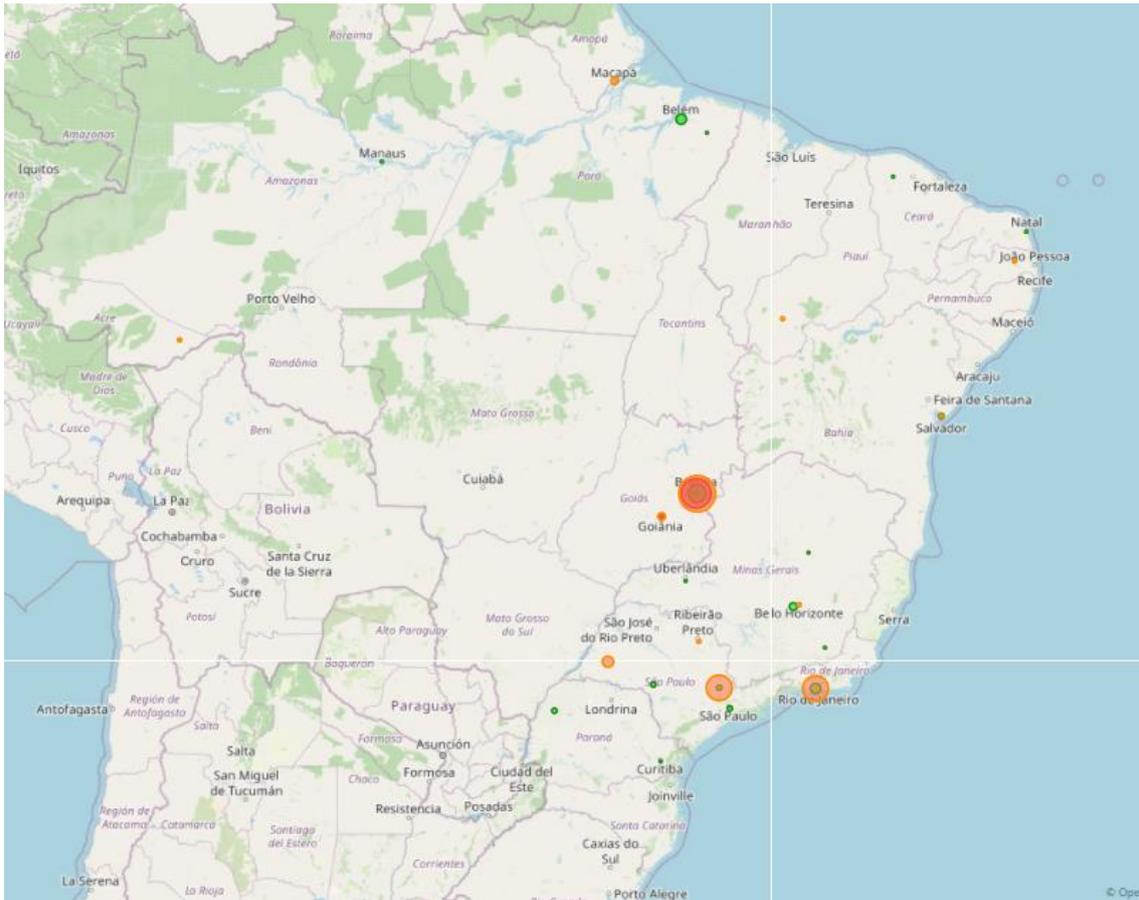

Figura 1 - Mapa de Acessos Mundiais

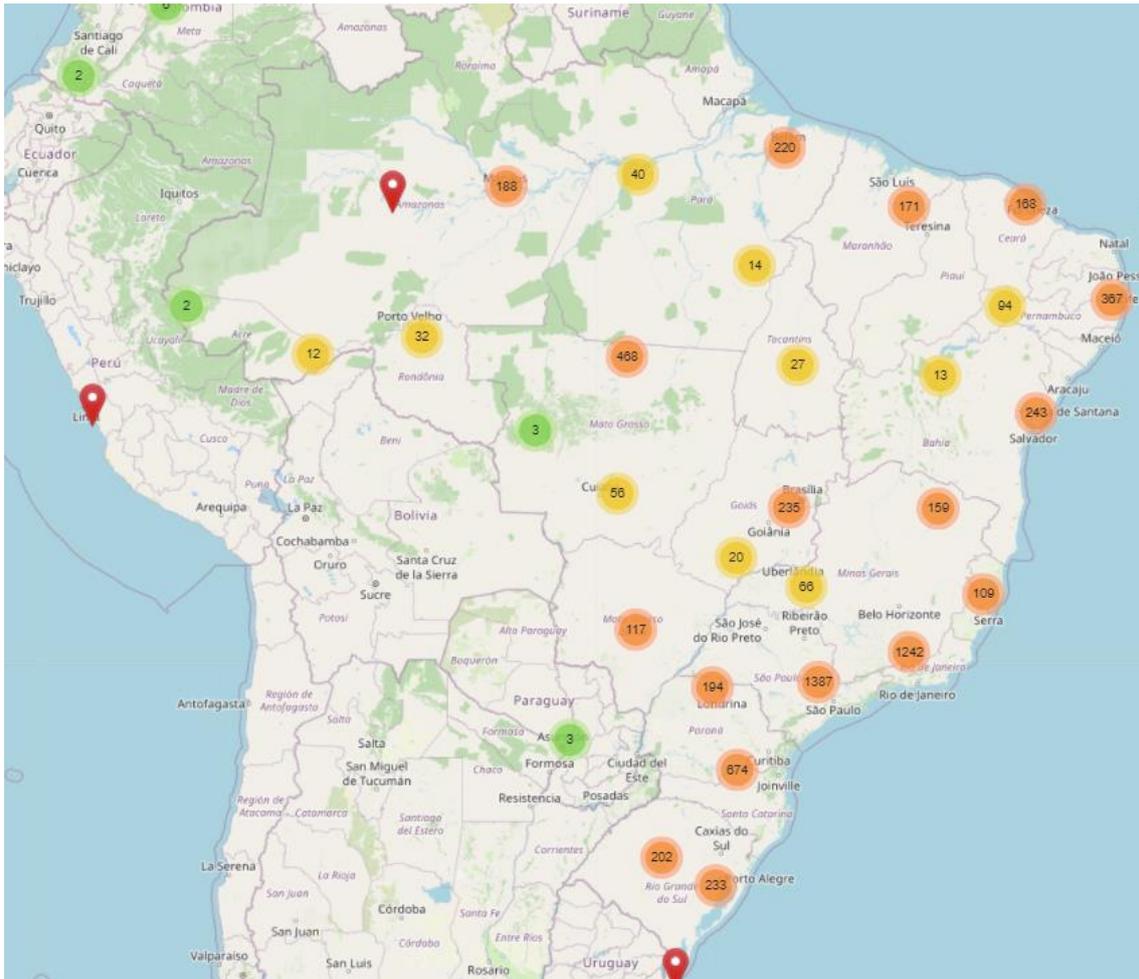

Figura 2 - Mapa de Acessos no Brasil

Figura 3 - Gráfico de Acessos Diários no SIGEN

#### 4.1. TIPOS DE EVENTOS

Figura 4 - Quantitativo de Eventos Registrados

Na figura acima, é possível visualizar o total de eventos existentes no período analisado, separados por tipo. Esse total normalmente pode ser repetido por máquinas, duplicando ou triplicando os valores enviados de acordo com a tipificação dos eventos, por exemplo:

Sinal de vida possui no intervalo de data **124.525 eventos**, sendo que estes foram enviados por **7830 - (sete mil e oitocentas e trinta)** máquinas para o sistema SISGEN.

O evento de segurança classificado como “Black List de Nome” implica na identificação de arquivos do sistema operacional que podem ter sido manipulados para efetuarem acessos indevidos ou inadvertidos ao sistema. Geralmente referem-se a arquivos que podem conter embutidos em seus conteúdos, códigos maliciosos que podem tentar capturar senhas e outras informações trafegadas entre o computador do usuário e o sistema protegido. Para gerar a lista de restrição (blacklist) a fabricante da solução mantém uma base atualizada com frequência mínima diária, que inclui arquivos, suas denominações e características de forma a garantir que mesmo que o processo de análise de comportamento de um determinado arquivo ou processo falhe, a solução possa bloquear a ação destes durante o acesso ao sistema protegido.

Pode ser também, a simples atualização dos programas utilitários de acesso (Google Chrome, Firefox) que tiveram seu hash modificado naquele dia em específico, e que em seguida foram reconhecidos como sistemas válidos. A blacklist de nome, possui uma tratativa específica de validação de componentes, com heurísticas determinadas pela sua assinatura.

#### 4.2. EVENTOS POR ARQUIVOS INFECTADOS

Na sequência, uma tabela explicativa e detalhada sobre o total dos arquivos existentes em várias máquinas com problemas encontrados em suas assinaturas, ou com chamadas indevidas. É possível compreender que existem chamadas que não são percebidas pelos usuários, pois rodam em serviços não

aparentes (rodam em processos daemon, background), onde alguns antivírus não conseguem detectar se são chamadas válidas ou não.

Muitos das chamadas estão utilizando o CMD.EXE do Windows, que pode estar sendo chamado para execução de scripts distintos (.BAT, ou outros) em máquinas que possuem algum tipo de fragilidade.

Tabela 1 – Eventos encontrados no período

#### 4.3. ALERTA DE IDENTIFICAÇÃO POR GEOIP

Os eventos de alerta de localização por geoposicionamento IP são gerados a partir da avaliação automática de localização e temporalidade de eventos do tipo login ou tentativa de acesso por parte de computadores ao SISGEN. No caso específico do único evento aqui tratado, foram utilizados como parâmetros o registro de eventos com mesmo ID e credencial e distinção de endereços IP e localização acima de 1.000 km e diferença de registros menor que 1 (uma) hora.

Nenhum dos casos abaixo apresentados, trouxeram perigo ao ambiente do sistema SISGEN. São alertas que foram verificados e não possuem referência à credencial compartilhada ou acesso indevido.

Na tabela a seguir, estão relatados os eventos encontrados no período:

ID do Dispositivo	Complemento	IP	Data
26D40345CFCA40B6	Distância 10213.759 km em 05:01:41 horas, da cidade BOTUCATU(BRA) para DAVIS(USA)	50.1.19.222	22/10/2021

## 6. CORGAS

Os gráficos a seguir mostram os acessos monitorados pelo Corgas:

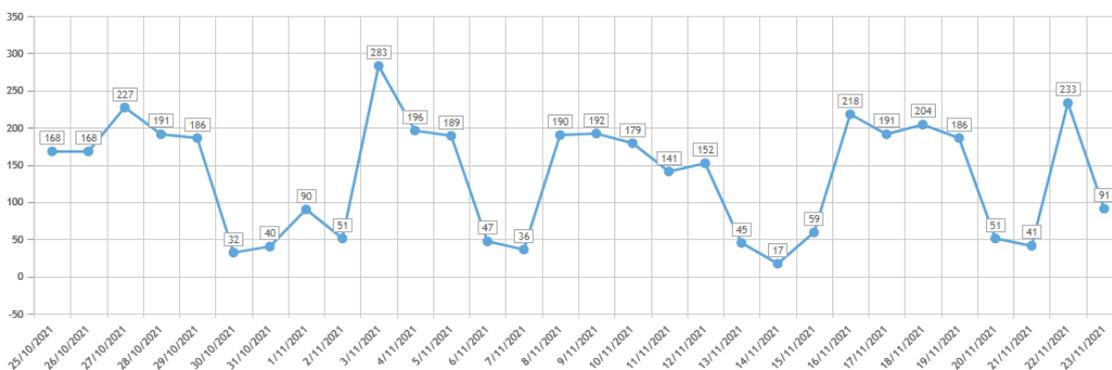

Figura 6 - Gráfico de Acesso dos Últimos 30 dias

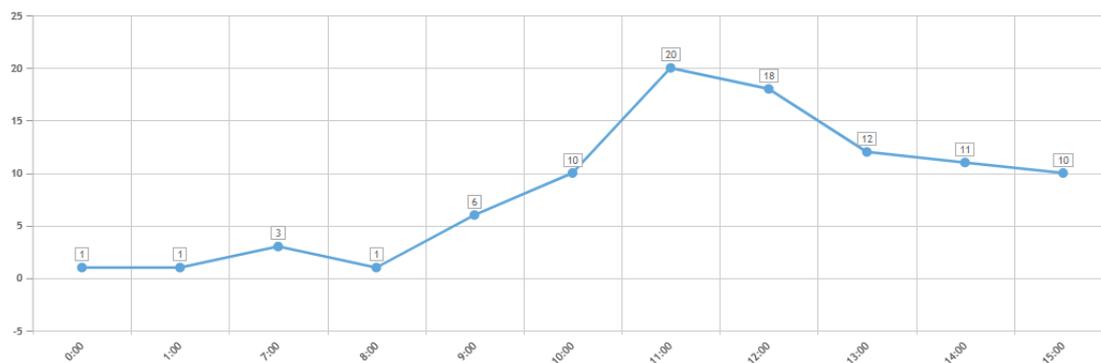

Figura 7 - Gráfico de Acessos por hora

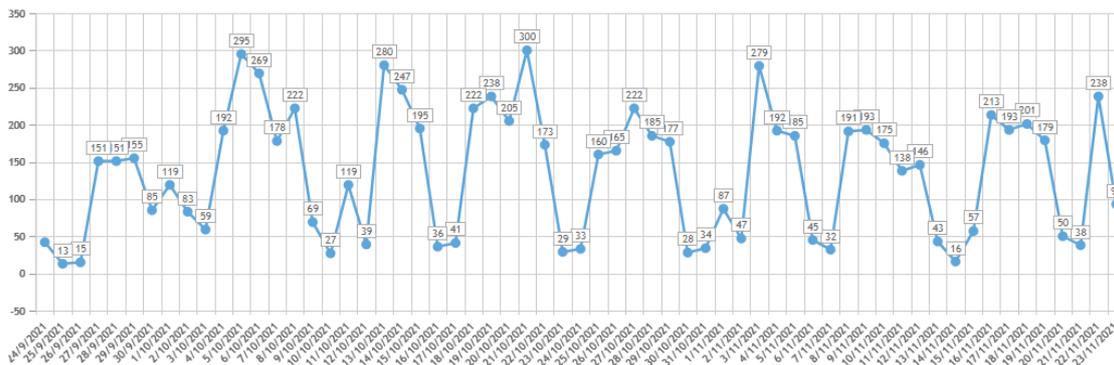

Figura 8 - Gráficos de Acessos dia a dia

## 7. DEFINIÇÃO DE INCIDENTES

Na data de 18/12/2020, em reunião realizada via Microsoft Teams, foi acordado que acessos simultâneos de usuários em localidades geográficas diferentes é considerada como incidente de segurança da informação, estes deverão ser tratados seguindo o mesmo fluxo dos incidentes do CSOC.

## 8. CHAMADOS ABERTOS

Para o período de apuração não foram registrados chamados de suporte técnico pelo PNUD - MMA

## 9. BASES DE ATUALIZAÇÃO
