

# **PLANO DE TRABALHO**

## **PROJETO:**

REALIZAÇÃO DO CADASTRO ESTADUAL FLORESTAL DE IMÓVEIS RURAIS (CEFIR) DE PEQUENAS PROPRIEDADES OU POSSES RURAIS EM TRÊS REGIÕES ONDE SE LOCALIZAM MOSAICOS DE UNIDADES DE CONSERVAÇÃO NO ESTADO DA BAHIA

## **CONTRATANTE:**

FUNDO BRASILEIRO PARA A BIODIVERSIDADE - FUNBIO

**PALMAS - TO  
ABRIL, 2019**

## 1. INTRODUÇÃO

Devido as suas proporções continentais, o Brasil possui considerada variação climática em seu território, partindo pelo trópico úmido ao norte, passando pelo semiárido no nordeste até as áreas temperadas ao Sul. E, associada a toda esta variação climática, criaram-se também grandes variações ecológicas em seu território devido aos diferentes efeitos que cada característica climática exerce sobre os componentes de um ecossistema, tornando assim possível segregá-los em cinco biomas: floresta amazônica, pantanal, cerrado, caatinga, pampas e mata atlântica (BRASIL, 2017).

Todos esses conjuntos de diferenciações climáticas e ecológicas proporcionaram caracterizar o Brasil como a nação com a maior biodiversidade no planeta, e tendo o conhecimento da riqueza de fauna e flora que o país detém e sobre tudo para auxiliar na manutenção e conservação de toda essa biodiversidade o governo federal sancionou a Lei nº 12.651/2012 intitulada Lei de Proteção da Vegetação Nativa, também conhecida como novo Código Florestal, pois revogou a antiga Lei nº 4.771/1965, a qual abordava o mesmo assunto.

Essa Lei Federal regulamenta o uso das florestas e demais formas de vegetação por meio de regras gerais sobre a proteção à vegetação, áreas de Preservação Permanente e as áreas de Reserva Legal, a exploração florestal, o suprimento de matéria-prima florestal, o controle da origem dos produtos florestais e o controle e prevenção dos incêndios florestais, além de prever instrumentos econômicos e financeiros para o alcance desses objetivos. Para tanto, a lei em questão determinou a criação e a obrigatoriedade a todos os imóveis rurais a realizarem o Cadastro Ambiental Rural – CAR, com o objetivo de possuir uma base de dados que possibilita o controle, monitoramento, planejamento ambiental e econômico, além de possibilitar o combate ao desmatamento (FONSECA & FERREIRA, 2014).

Outro aspecto importante que sofreu significativos impactos com a reformulação do Código Florestal foi a agricultura familiar. Este é um setor da agricultura que corresponde a cerca de 24% das terras agrícolas no país e é definido pela referida lei como o imóvel rural com área inferior a quatro módulos fiscais que emprega a própria família como mão-de-obra nas atividades econômicas do imóvel, incluindo os assentamentos e projetos de reforma agrária (MACEDO, 2012).

Os principais impactos sobre este grupo de produtores incidiram no aspecto das ocupações e explorações das Áreas de Preservação Permanente - APP e de Reserva

Legal, estabelecendo condições especiais de exploração dessas áreas para agricultores familiares (BRASIL, 2011).

Portanto, diante de todo esse cenário legislativo acerca do uso e exploração dos recursos florestais e conseqüentemente de uso e ocupação da terra, o estado da Bahia reformulou o Cadastro Estadual Florestal de Imóveis Rurais – CEFIR, criado por meio da Lei Estadual 10.431/2006, sendo implementado desde 2012, porém, além de atender o que determina o novo Código Florestal, o CEFIR também contempla as solicitações de licenciamento ambiental e de outorga de uso dos recursos hídricos (INEMA).

Essa regularização ambiental da propriedade rural por meio do CEFIR é um dos resultados esperados pelo Projeto Biodiversidade e Mudanças Climáticas na Mata Atlântica, coordenado pelo Ministério do Meio Ambiente – MMA, no âmbito da parceria para o desenvolvimento sustentável Brasil-Alemanha, cujo objetivo é contribuir com a conservação da biodiversidade e a recuperação da Mata Atlântica, com ênfase em regiões onde estão localizados os mosaicos de unidades de conservação, contribuindo para a mitigação e adaptação às mudanças climáticas.

Uma das regiões de atuação do projeto é o Mosaico de Áreas Protegidas do Extremo Sul da Bahia – MAPES, que contempla três municípios do litoral da Bahia, sendo eles os municípios de Prado, Porto Seguro e Santa Cruz Cabrália. Esses municípios serão contemplados com o apoio do projeto para realizar as inscrições no CEFIR de propriedades rurais com área inferior a quatro módulos fiscais localizadas prioritariamente na proposta de corredor ecológico entre o Parque Nacional – PARNA Pau Brasil e o Parque Nacional – PARNA Monte Pascoal e na proposta de conectividade entre o PARNA Pau Brasil e a RPPN Estação Veracel, conforme mapas apresentados nos anexos 1 e 2 do Termo de Referência elaborado para contratação desta consultoria.

Deste modo, diante da experiência adquirida com prestação de serviços no ramo de cadastramento de imóveis rurais, a empresa Meyer Engenharia e Consultoria LTDA foi selecionada no processo seletivo realizado pelo Fundo Brasileiro para Biodiversidade – Funbio, gestor financeiro dos recursos do Projeto Biodiversidade e Mudanças Climáticas na Mata Atlântica, e contratada para realizar o cadastramento de 4.348 imóveis rurais ou posses rurais com até 4 módulos fiscais localizados nos município de Prado - BA, Porto Seguro - BA e Santa Cruz Cabrália - BA.

## **2. OBJETIVO**

Realizar o Cadastro Estadual Florestal de Imóveis Rurais – CEFIR de 4.348 (Quatro mil trezentos e quarenta e oito) imóveis rurais ou posses rurais com até 4 (quatro) módulos fiscais, ou seja, com área de até 140 hectares, localizados preferencialmente na proposta de corredor ecológico entre o Parque Nacional – PARNA Pau Brasil e o Parque Nacional – PARNA Monte Pascoal e na proposta de conectividade entre o PARNA Pau Brasil e a Reserva Particular de Patrimônio Natural – RPPN Estação Veracel. Apesar da preferência de cadastramento nas áreas mencionadas, toda a região dos municípios de Prado, Porto Seguro e Santa Cruz Cabrália será abrangida pelo projeto.

Elaborar e apresentar Plano de Recuperação de Áreas Degradadas – PRAD e Plano de Recuperação Ambiental – PRA, no caso de existência de passivos ambientais relativos às Áreas de Preservação Permanente e Reserva Legal nas propriedades rurais inscritas no CEFIR.

### **3. EXECUÇÃO DO SERVIÇO**

#### **3.1. BASE DE DADOS**

##### **3.1.1. Dados Geográficos**

O Sistema de Informação Geográfica - SIG juntamente com o Banco de Dados Geográficos são geotecnologias que auxiliam o cadastramento de imóveis rurais por permitir a integração de dados de diversas fontes de caráter geográfico em um único sistema, e assim possibilita a produção de novas informações a partir de análises e consultas espaciais.

Deste modo a Meyer Engenharia e Consultoria Ltda realizou uma pesquisa buscando informações sobre quais os tipos de dados geográficos que o governo estadual já possuía e que poderiam ajudar no cadastramento dos imóveis rurais. Essa pesquisa foi realizada em websites, através da realização de telefonemas e via e-mail aos órgãos públicos estaduais competentes.

Assim, junto à Secretaria Estadual de Meio Ambiente da Bahia – SEMA/BA foram obtidos arquivos na extensão shapefile de dados geográficos referentes a hidrografia estadual, aos limites municipais e a altimetria do estado. Todos estes arquivos em shapefile se encontram em uma escala de 1:100.000, conforme pode ser observado nos anexos deste plano de trabalho.

Contudo ao realizar a pesquisa no website do Instituto do Meio Ambiente e Recursos Hídricos do Estado da Bahia – INEMA/BA<sup>1</sup>, foi constatado que são disponibilizados para download mapas temáticos de dados geográficos de tipologia de vegetação, solos e áreas protegidas em escala de 1:250.000, e ainda mapas temáticos de dados geográficos de biomas e unidades de conservação na escala de 1:350.000.

A base de dados georreferenciados supracitada está disponibilizada em anexo a este Plano de Trabalho. Toda essa base de dados, juntamente com o acesso a imagens de satélites multitemporais, será relevante para o desenvolvimento das atividades, pois terá como função auxiliar a equipe técnica após a realização do levantamento de campo. Este levantamento será realizado utilizando-se de GPS de navegação (preferencialmente da marca GARMIN) e equipamentos para fotografias das áreas (máquinas fotográficas e/ou Smartphone). Feito isso e estando de posse do levantamento das áreas dos imóveis, como área de reserva legal, área de preservação permanente, área total do imóvel e hidrografia, a base auxiliará na classificação dessas áreas, quanto a tipologia do solo e vegetação, a altimetria do imóvel, bem como constatar se o imóvel é parte integrante de alguma unidade de conservação, por exemplo.

<sup>1</sup><http://www.inema.ba.gov.br/>

Portanto, a realização do CEFIR contará com informações identificadas no levantamento de campo e com as informações fornecidas pela base de dados geográficos, de forma a garantir a produção de um cadastramento coerente com as características locais dos imóveis.

O levantamento dos dados de campo e cadastramento dos imóveis no CEFIR seguirá as orientações descritas no item 6.3 do Termo de Referência dessa consultoria.

### **3.2. Dados de Imóveis Rurais**

Para a determinação dos imóveis rurais com potencial ao cadastramento buscou-se como fonte o website da Secretaria Especial – SEAD<sup>2</sup> de Agricultura Familiar e do Desenvolvimento Agrário por ser a instituição pública federal responsável pelas iniciativas voltadas para o público alvo desta consultoria, que são os produtores da agricultura familiar.

Portanto para a definição dos 4.348 (Quatro mil trezentos e quarenta e oito) produtores a serem cadastrados foi realizado uma pesquisa, por município, de produtores que possuem a Declaração de Aptidão ao Pronaf – DAP, declaração essa que é um documento criado para identificar o agricultor familiar nas áreas rurais.

Com esta relação dos produtores que possuem o DAP foi então realizado um filtro de modo a segregar os produtores com o DAP ativos daqueles produtores com o DAP expirado.

Posterior a essa seleção, foi realizado o download dos dados de imóveis cadastrados na plataforma CEFIR por município abrangido pelo projeto, e assim foi realizado uma nova filtragem com o objetivo de separar os agricultores que já possuíam o cadastro da relação dos produtores com DAP ativo, o que gerou assim a relação apresentada no anexo I, II e III deste produto, as quais se referem aos produtores com DAP ativo e sem cadastro no CEFIR.

Em resumo, são apresentados nos anexos I a III deste produto um total de 4.833 pequenos produtores rurais possivelmente beneficiários dessa consultoria que poderão ter suas propriedades inscritas no CEFIR, sendo 1537 produtores no município de Prado, 2188 em Porto Seguro e 1108 em Santa Cruz Cabrália.

Caso o número de inscritos no CEFIR nesses três municípios não alcance o mínimo de 4.348 cadastros previstos no contrato, poderão ser inscritos proprietários de municípios vizinhos à esses três municípios, sendo eles Belmonte, Canavieiras,

<sup>2</sup><http://smap14.mda.gov.br/extratodap/PesquisarDAP>

Eunápolis, Guaratinga, Itabela, Itagimirim, Itapebi ou Mascote, desde que que essas alterações no Plano de Trabalho sejam validadas previamente pelas equipes da SEMA/BA e do MMA.

### **3.2.1. Elaboração de PRAD e PRA**

Conforme a Lei nº 12.651/2012 é necessário a adequação das propriedades rurais que possuem passivos ambientais em relação às áreas de preservação permanente e reserva legal por meio da adesão ao Programa de Regularização Ambiental – PRA.

No entanto, é comum encontrar pequenos produtores que desconhecem essa necessidade, ou até mesmo sabem que necessitam corrigir os seus passivos ambientais, mas não sabem como implantar estas correções. São nesses cenários que a empresa Meyer Engenharia e Consultoria trabalhará em conjunto com o pequeno produtor, de modo a fornecer a consultoria ambiental e desenvolver tais medidas através da elaboração do Plano de Recuperação de Área Degradada - PRAD e da adequação ao Programa de Regularização Ambiental - PRA.

Assim conforme a realização do levantamento de campo, será realizado o diagnóstico das propriedades contempladas neste projeto, com o objetivo de identificar possíveis ações que estejam provocando a degradação ambiental no imóvel bem como ocupações e uso do solo em áreas inadequadas.

Esse diagnóstico será feito a partir da análise de toda a área do imóvel de modo que seja possível identificar tais ações, e quando identificadas, a equipe de campo já realizará a caracterização e a avaliação desta degradação. Feito toda essa análise em campo, tais dados coletados serão enviados para o escritório para o devido processamento e análise dos dados com o auxílio do banco de dados geográficos e das imagens multitemporais, de modo que permita definir se há algum passivo ambiental nas propriedades e quais as técnicas de recuperação de área se adequam melhor as características do imóvel.

Com a identificação dos imóveis que possuem passivos ambientais e com a definição da melhor técnica de recuperação de área para cada imóvel, serão então elaborados o PRAD e o PRA que atenderá as exigências descritas no item 6.4 do Termo de Referência, que seguem as exigências da legislação vigente e as características inerentes ao imóvel, de modo que seja levado em consideração a necessidade e o uso que esse pequeno produtor desenvolve em seu imóvel.

Os PRAD e PRA elaborados pela Meyer Engenharia serão utilizados pelo Projeto Biodiversidade e Mudanças Climáticas na Mata Atlântica para a implementação de projetos de recuperação dos passivos ambientais identificados, com prioridade para propriedades que se localizem na proposta de conectividade entre o PARNA Pau Brasil e a RPPN Estação Veracel (Anexo II do Termo de Referência).

Dessa forma, o primeiro lote de inscrições no CEFIR (Produto 2) irá priorizar a inscrição de imóveis rurais localizados na área de conectividade entre o PARNA Pau Brasil e a RPPN Estação Veracel.

A identificação das APP e as propostas de alocação de RL dos imóveis a serem cadastrados deverão priorizar alternativas locais para promover a conectividade entre as APPS e RL de propriedade vizinhas, visando a formação de um corredor ecológico entre as duas Unidades de Conservação mencionadas. A promoção deste corredor ecológico é considerada uma medida de Adaptação às Mudanças Climáticas baseada em Ecossistemas (AbE), abordagem esta apoiada pelo Projeto Mata Atlântica.

#### **4. ESTRATEGIA PARA SENSIBILIZAÇÃO**

A divulgação do trabalho de cadastramento de imóveis rurais se dará por meio de anúncios na rádio local, devido a este ser considerado um meio mediático de menor barreira capaz de chegar nas propriedades rurais mais remotas, bem como a instalação de faixas de divulgação nas instituições parceiras e a utilização de carro de som para a divulgação sonora do projeto. Serão utilizados também as páginas oficiais da Meyer Engenharia e Consultoria nas redes sociais e o próprio website da empresa, para divulgação das atividades sendo que esses ambientes serão também compartilhados com as instituições públicas locais para que estas possam colaborar para a divulgação do projeto.

Outra forma de divulgação se dará por meio da distribuição de cartilhas e folders, fixação de adesivos, cartazes ou banners em locais públicos e instituições voltadas ao público alvo do projeto como nas Prefeituras Municipais, Instituto de Terras do Estado, Instituto de Colonização e Reforma Agrária - INCRA, nas Secretarias Municipais de Agricultura, na Secretaria Estadual de Meio Ambiente e Recursos Naturais e Sindicato dos Trabalhadores.

As artes das peças de comunicação a serem utilizadas irão conter as logomarcas da SEMA/BA e do Projeto Mata Atlântica, e serão enviadas previamente para aprovação da SEMA/BA e MMA.

A principal estratégia a ser utilizada consiste na formação de parcerias com o Sindicato da Agricultura Familiar e Prefeituras Municipais através das Secretarias Municipais de Meio Ambiente e de Agricultura, pois tais parcerias são bastante expressivas para a concretização e alcance do número total de cadastros uma vez que o auxílio/presença de representantes destes órgãos nas comunidades locais e em reuniões

com os produtores rurais gera uma maior mobilização e os pequenos produtores rurais se sentem mais seguros a aderirem ao projeto e realizarem o CEFIR, além desses realizarem uma divulgação mais próxima dos interessados durante as suas próprias atividades rotineiras e em reuniões destas instituições com os moradores das comunidades rurais dos municípios.

Assim, as reuniões irão ocorrer nas próprias comunidades estabelecidas em cada um dos municípios contemplados pelo projeto com a presença de representantes do sindicato e/ou secretarias. A equipe de campo da empresa já irá juntamente com a equipe de organização para que ao finalizar a reunião com todos os produtores já seja dado início ao levantamento dos imóveis passíveis de cadastro no CEFIR, assim como a coleta de toda a documentação necessária para o cadastramento.

As reuniões serão documentadas através de registros fotográficos, atas e folhas de presença para coleta de assinatura dos proprietários, sendo tais documentos enviados em anexo aos relatórios de entrega de produtos.

Ressalta-se que previamente ao agendamento das reuniões nas comunidades será procedida uma reunião com a SEMA/BA de forma a realizar o alinhamento das melhores datas, locais e repasse da pauta da reunião, bem como do material a ser divulgado em cada uma destas.

Outra estratégia de comunicação e mobilização (**inclusive uma das melhores**) que a empresa Meyer Engenharia e Consultoria LTDA irá realizar é a divulgação nas escolas (caso existam) localizadas nas comunidades rurais dos municípios de atuação, mobilizando toda a comunidade local para reuniões a serem realizadas em datas predefinidas, através de informativo a todos os alunos para que os mesmos entreguem a seus pais para que compareçam à reunião. Na data da reunião será divulgado detalhadamente do que se trata o serviço e da importância e benefícios do mesmo e com isso, após o conhecimento de todos e ainda com todos ali reunidos, será procedida a coleta da documentação e levantamento *in loco* dos dados ambientais para cadastramento dos imóveis rurais daquela comunidade.

## **5. CRONOGRAMA DE AÇÕES**

O início das atividades referentes ao Contrato FUNBIO 42/2019 se dará a partir da elaboração do presente plano de trabalho, no qual são descritas as etapas do planejamento que englobam a execução do serviço bem como as metodologias e ações a serem empregadas para a fiel execução do mesmo. Após a aprovação do referido plano de trabalho por parte do MMA, SEMA/BA e FUNBIO é que será dado início a mobilização de equipes para a efetivação dos cadastros e consequente entrega de produtos.

As ações de sensibilização e realização de cadastros serão priorizadas no município de Porto Seguro, buscando cadastramentos de propriedades localizadas no corredor ecológico entre o PARNA Pau Brasil e a RPPN Estação Veracel.

O quadro 01 ilustra o cronograma físico a ser seguido no decorrer da execução do Termo de Contrato foco do presente Plano de Trabalho.

## 6. ANEXO I – RELAÇÃO DE POSSÍVEIS PRODUTORES A SEREM CADASTRADOS EM PRADO
